Abstract

- The purpose of this system is to generate questions and evaluating their answers automatically.
- It takes text as input and summarizes and generates questions using T5 model.
- SQUAD Dataset is used for training the model.
- Distractors are generated using Wordnet and Sense2vec approaches.
- This system solves the problem of the manual creation of questions and reduces time consumption.

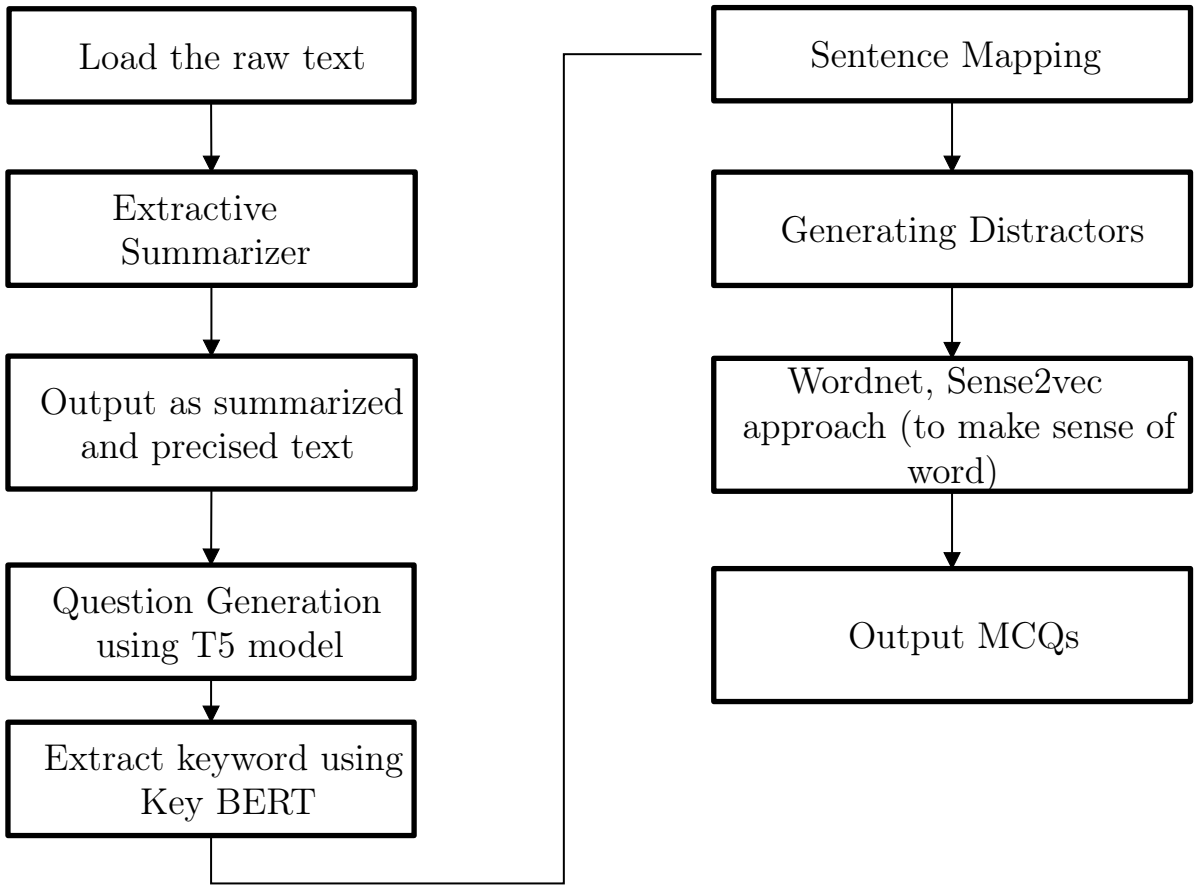
Modules

- Extractive Summarization
- Question Generation
- Extracting Keywords
- Generating Distractors

Design Architecture



VISHNU
UNIVERSAL LEARNING

Implementation

```
#  An example of a word with two different senses
original_word = "cricket"

syns = wn.synsets(original_word,'n')

for syn in syns:
  print (syn, ": ",syn.definition(),"\n" )

synset_to_use = wn.synsets(original_word,'n')[0]
distractors_calculated = get_distractors_wordnet(synset_to_use,original_word)

print ("\noriginal word: ",original_word)
print (distractors_calculated)

original_word = "cricket"
synset_to_use = wn.synsets(original_word,'n')[1]
distractors_calculated = get_distractors_wordnet(synset_to_use,original_word)

print ("\noriginal word: ",original_word)
print (distractors_calculated)
```

VISHNU
UNIVERSAL LEARNING

Results

```
Synset('cricket.n.01') :  leaping insect; male makes chirping noises by rubbing the forewings together

Synset('cricket.n.02') :  a game played with a ball and bat by two teams of 11 players; teams take turns trying to score runs

original word:  cricket
['Grasshopper']

original word:  cricket
['Ball Game', 'Field Hockey', 'Football', 'Hurling', 'Lacrosse', 'Polo', 'Pushball', 'Ultimate Frisbee']
```

Time Line

Date(from-to)	Duration	Task
29/9/2022-15/10/2022	2 weeks	• Domain selection and abstract submission
16/10/2022-13/11/2022	4 weeks	• Literature survey • Requirement analysis • Data Preprocessing
14/11/2022-23/12/2022	5 weeks	• Integrating UI with modules

Conclusion

The problem of manually creating questions is solved with the proposed system. The proposed system creates automated questions with the help of NLP that reduces human intervention and it is a cost and time effective system. And the accuracy of the distractor generated is reasonably high. This system not only helps teachers with E-assessments but also helps students who are preparing for competitive exams. Students can test their ability to solve the questions and can also check their understanding of the concepts.
